

Masjid Income & Expense Management System

Client Requirements Document — Simple Single-Masjid Web Application

1. Project Overview

A simple web application for a masjid to digitally record and track its income and expenses. The system should make it easy for the masjid committee or authorized users to add income and expense entries, view financial records, search and filter transactions, and see total income, total expenses, and current balance.

2. Users

The application will have authorized users who can manage the masjid's financial records. For the initial version, there is no need for complex user roles or permissions.

3. Income Management

Users should be able to add an income record with:

- Amount
- Category
- Description/Note
- Date

Example: ■5,000 — Donation — Friday donation — 15 August 2026.

Default income categories may include Donation, Zakat, Sadaqah, Jumu'ah Collection, Membership/Contribution, and Other. Categories should be manageable from the application.

4. Expense Management

Users should be able to add an expense record with:

- Amount
- Category
- Description/Note
- Date

Example: ■2,500 — Electricity — Monthly electricity bill — 10 August 2026.

Default expense categories may include Electricity, Water, Maintenance, Cleaning, Salary/Wages, Construction, Equipment, Events/Programs, Office Expenses, and Other. Categories should be manageable from the application.

5. Transaction List

The application should provide a page showing all income and expense transactions. Each transaction should display Date, Type (Income/Expense), Category, Description, and Amount. Users should be able to search transactions, filter by type, category, and date/date range, sort by date, edit transactions, and delete transactions.

6. Dashboard

The dashboard should provide a quick financial overview with Total Income, Total Expenses, and Current Balance.

Current Balance = Total Income – Total Expenses.

The dashboard should support Today, This Week, This Month, This Year, and Custom Date Range filters.

7. Financial Reports / Summary

The application should provide a simple financial summary for a selected period. It should show total income, total expenses, net balance, and category-wise breakdowns for both income and expenses.

8. Transaction Details

The required transaction information should be minimal.

Income: Amount (Required), Category (Required), Date (Required), Description (Optional).

Expense: Amount (Required), Category (Required), Date (Required), Description (Optional).

No payment method field is required. The system does not need to record cash, bank, UPI, cheque, or other payment methods.

9. Editing & Deleting

Users should be able to edit incorrect transaction information and delete transactions. The application should show a confirmation message before deletion, such as: "Are you sure you want to delete this transaction?"

10. Data Accuracy

The application should automatically calculate total income, total expenses, balance, category totals, and period totals. Users should not manually enter the balance. The balance must always be calculated from recorded transactions.

11. Authentication

The application should have a simple login system so that financial information is not publicly accessible. The initial version requires Login, Logout, and User Account functionality. Complex role management is not required.

12. Responsive Design

The application should work properly on desktop, laptop, tablet, and mobile phone. The interface should be simple enough for masjid committee members with limited technical knowledge to use comfortably.

13. Main Pages

The initial application can consist of:

1. Login
2. Dashboard
3. Income
4. Expenses
5. Transactions
6. Reports/Summary
7. Categories
8. Settings/Profile

14. Out of Scope

To keep the first version simple, the following are not required:

- Multiple masjids

- Subscription plans
- Payment gateway
- Bank integration
- Cash/bank/payment-method tracking
- Online donation collection
- Donor management
- Zakat calculation
- Payroll management
- Inventory management
- Asset management
- Complex accounting
- Double-entry bookkeeping
- Multi-level permissions
- Public-facing website
- Mobile application

15. Initial Goal

The goal of the first version is to provide a reliable and easy-to-use digital register for recording and monitoring a masjid's income and expenses. The system should prioritize simplicity, clarity, and accurate financial totals rather than trying to become a complete accounting system.
